

# Agricultural Production Statistics in New Zealand

due Wednesday, September 30, 2026

Isaiah Moliga-Puleasi

Citation: This dataset comes from TidyTuesday's 2-17-26 weekly data challenge, [Agricultural Production Statistics in New Zealand](#), curated by Jen Richmond. The [data](#) is derived from Figure.NZ.

Description: The Agricultural Production Statistics in New Zealand dataset provides quantitative information on New Zealand's agricultural systems. By collecting agricultural data in New Zealand, we can see the human-agriculture relations that arise over time. This dataset is particularly interested in the decline of sheep populations relative to humans over.

```
library(tidyverse)
```

```
dataset <- readr::read_csv('https://raw.githubusercontent.com/rfordatascience/tidyuesday/master/data/2026/2026-09-17/2026-09-17_agricultural_production_statistics_in_new_zealand.csv')

new_dataset <- dataset |>
  dplyr::filter(measure == "Total Sheep") |>
  dplyr::select(year_ended_june, measure, value)

new_dataset |>
  ggplot(aes(x = year_ended_june, y = value)) +
  geom_line() +
  labs(
    title = "Total # of sheep in New Zealand (1935-2024)",
    x = "Year",
    y = ""
  )
```
